Beautiful views for the house and garden.

For over 30 years, DURAL has been your expert for profile and mat systems, including solutions for the garden and landscaping, as well extended outdoor areas.

When renovating your balcony, giving entry areas a new look with safety in mind, finishing your terrace with loosely laid modern terrace flooring or to meet the goal of making houses fit for the next generation, the coordinated DURAL product components are a good choice.

The diversity of our products provides inspiration for beautiful views in your house and garden.

DURABAL BL/ BT

DURABAL BL/BT are balcony angle profiles with a drip edge for the elegant edging of exposed edge areas of surface constructions. The front edge cover in various heights also conceals higher layered structures between the subsurface and the flooring.

Areas of application of DURABAL BL are balconies and terraces, for installation in gravel / stone bed, drainage screed, on stilt bearings for raised floors or for direct laying. Drainage slots provide straightforward secondary drainage, thereby preventing the build-up of stagnant water within the floor construction.

DURABAL BT applies to surface constructions laid in a conventional mortar bed. As required, the underside of the surface structure can be clad using the matching DURABAL BW profiles.

DURABAL BL / BT

Balcony angle profiles with drip edge and edge protection.
With or without drip sill.

DURABAL BK

DURABAL BK are elegant and flexible aluminium edging profiles with an integrated drip edge.

Application areas are tiled balconies and terraces where flooring is laid in thin-bed mortar. A range of different heights are available to match the respective flooring thickness.

The 18 mm and 60 mm high front edge cover conceals the entire layered structure between the subsurface and the flooring in style.

Matching most construction heights. Including corner pieces and connectors.

DURABAL BD

DURABAL BD balcony angle profiles for a smooth finish and as cladding for balconies and terrace edge areas are suitable for the installation of tile, natural stone or split mortar flooring up to an installation height of 15 mm.

Bitumen waterproofing can be elegantly finished with DURABAL BD balcony angle profiles.

DURABAL BD comes in versions with 55 mm and 75 mm high panels and is available in silver anodized aluminium and powder-coated grey surface finishes.

The 80 m wide support base is provided with additional drill holes to make mounting during assembly easier.

DURABASE DD 80++

ideal for creating large surface drainage areas in combination with tiled, natural and artificial stone flooring. The mat can be laid in a gravel/stone bed, in drainage screed and even directly onto the film (without support plates).

Suitable for heavy surcharge loading.

Very high drainage capacity.

Thanks to the special layout of the dimples with varying heights of 6 and 8 mm, it is possible to produce a drainage area that is large enough in the long run even for high loads. The space between the dimples and the mesh fabric also allows the floor construction to dry out rapidly. In addition, the seal is fully protected from thermal and mechanical loading.

DURABASE DD 80++

Material Polypropylene yellow

Height 8 mm, Width 1000 mm

Pallet 9 Rolls (112.5 m²)

Single roll = Roll length 12.5 m

DURABASE DD 80++

Drainage mat for highly water permeable flooring constructions outdoors.

DURABASE DD 80

ideal for creating large surface drainage areas in combination with tiled, natural and artificial stone flooring.

Drainage channels on both sides.

Installation under screed and gravel-bed.

Moisture which seeps into the flooring construction is drawn away efficiently by the drainage surface created by the dimples. Thanks to the special layout of the drainage channels, any water which occurs can also be drawn off below the mat (dual drainage).

DURABASE DD 80

Material Polypropylene yellow

Height 8 mm, Width 1000 mm

Pallet = 9 Rolls (135 m²)

Single roll = Roll length 15 m

DURABASE DD 80

Matting system for the dual drainage of tiled flooring outdoors.

DURABASE CI++

The matting system for decoupling with a sealing effect for tiled and natural stone surfaces in indoor and outdoor areas.

The crack-bridging properties of the mat make it ideally suited for use in renovation projects. It allows new tiles to be laid on old and damaged tiled floors, provided that these are still load-bearing.

On balconies and patios, DURABASE CI++ provides an additional bonded seal in conjunction with the tiles and prevents water from percolating through.

Its high elasticity ensures good crack-bridging properties making it particularly suitable for use on difficult subsurfaces such as wood, mastic asphalt and relatively fresh cement and anhydrite screeds.

3. Woven mesh

2. Dimpled structure

1. Underlay fabric

DURABASE CI++

Crack-bridging decoupling mat with shearing force protection for indoor and outdoor areas.

The problem

Movements in the subfloor can cause cracks to form in the tiled surface, or old and damaged subfloor (such as wooden floors) are unsuitable for tiling onto directly.

The solution

The installation of a DURABASE CI++ mat ensures that smaller cracks in the subsurface are absorbed; the tiles are decoupled and the cracks are passed into the tiles. This makes it possible to lay new tiles on old and problematic yet still load-bearing surfaces.

The advantages

- High shear elasticity
- Quick and easy installation
- Optimum installation quality
- Shear-stress optimised
- Tiles can be laid once the floor screed can be walked on
- Ideal for renovation projects
- Sealing in outdoor areas

DURABASE CI++ Accessories for waterproofing of pipe connections and matting junctions. Permanently watertight.

U-DRAIN

High-quality PVC drainage channel system with an elegant grating in anodised aluminium.

Equipped with a full block Styropor assembly aid in the factory, which protects the channel from contamination and deformation throughout the entire installation phase.

Suitable for access by vehicles with a max. wheel load of 1.100 kg.

Outstanding self-cleaning properties thanks to the ultra-smooth inner surface of the channels.

Complete accessory program.

DW-DRAIN

Door elements on balconies and terraces also need reliable protection from the accumulation of water due to the wind and heavy rain. The high quality DW-DRAIN drainage channels collect any accumulating surface water and allows the water to soak away into the ground through the drainage openings. Installation of a drainage channel also prevents the formation of puddles and the dirtying of facades or door elements due to splashing water.

Straightforward installation. Durable and easy to clean. Practically infinitely extendible.

BLTS 455 **Height 30 mm** 45 x 45 x 5 mm

ACCESSORIES

Material for the Installation of concrete and ceramic plates in square and rectangular format on terrace and balcony.

DURAWAY Ready-made mats
Walk-off zones can be installed at all entrance and porch areas, with DURAWAY ready-assembled mats in two sizes and two neutral colours: black and light grey.

DURAWAY Easy
Extremely durable. Very easy to clean. Anti-slip. Suitable for use indoors and outdoors. Resistant to heat and cold. Leading edge and closing edge in aluminium.

DURAWAY Doormat and frame system
A choice of six different doormat system configurations is available to suit the architecturally important entrance and transitions areas in your building. DURAWAY always collects the dirt precisely at those locations where it would otherwise be constantly brought into the building. The installation height of 10 mm is ideal for incorporating in existing flooring.
