PROFILE COLLECTION FOR WALL/FLOOR/STAIRWELL LVT/DESIGN COVERINGS

Design surfacing is now a topical issue. Things that looked outdated yesterday can now get a shiny, new decorative appearance thanks to ultra-modern surfacing technology. Low surfacing heights provide major advantages, but they also pose big challenges regarding appropriate profile design for such heights, as each design surfacing has an end or an edge that needs to be sealed.

ANGLE SEPARATION PROFILES

FLOOR/FLOOR · WALL/WALL FOR DESIGN SURFACING

Much of the modern design surfacing excels due to its low structural height. The DUROSOL angle and separating profiles are available for structural heights from 2 mm and can be used to edge or finish almost any design surfacing. DUROSOL can also be used on a wall as a horizontal surfacing end profile or as a vertical separation profile. ADAPT Vario is used when there is no space for skirting or when the interior design requires slim wall/floor connections.

FLOOR/FLOOR

LINO

UNIFLOOR

CLIPPER

UNIFLOOR

SOFT

Height compensation problems are common when designer surfacing is used. The differences must either be compensated for by adjusting the foundation or by using surfacing material with a different thickness. The sturdy and variable height adjusters CLIPPER, UNIFLOOR, LINO, LP-TRANS and DUOFLOOR ensure that this can always be done with a high level of design quality and safety. The EXAKT and SOFT profile systems are additionally equipped with an edging strap that encloses the surfacing edge along the whole length of the profile.

LP TRANS

CLIPPER CARPET

FOR DESIGN SURFACING

TEKA edging profile

Surfacing height__

2,5 · 3,5 · 5 · 6 mm

Profile length__300 cm

Colours__Aluminium

silver anodised

Attachment__screws

Modern design surfacing does not provide grip on the step.

However, this is not a problem when TEKA edging profiles

with one-sided or double-sided edge protection grooves

are used. The massive aluminium profiles look attractive

and have slip-reducing properties.

TEKA edging profile

Surfacing height__5 mm

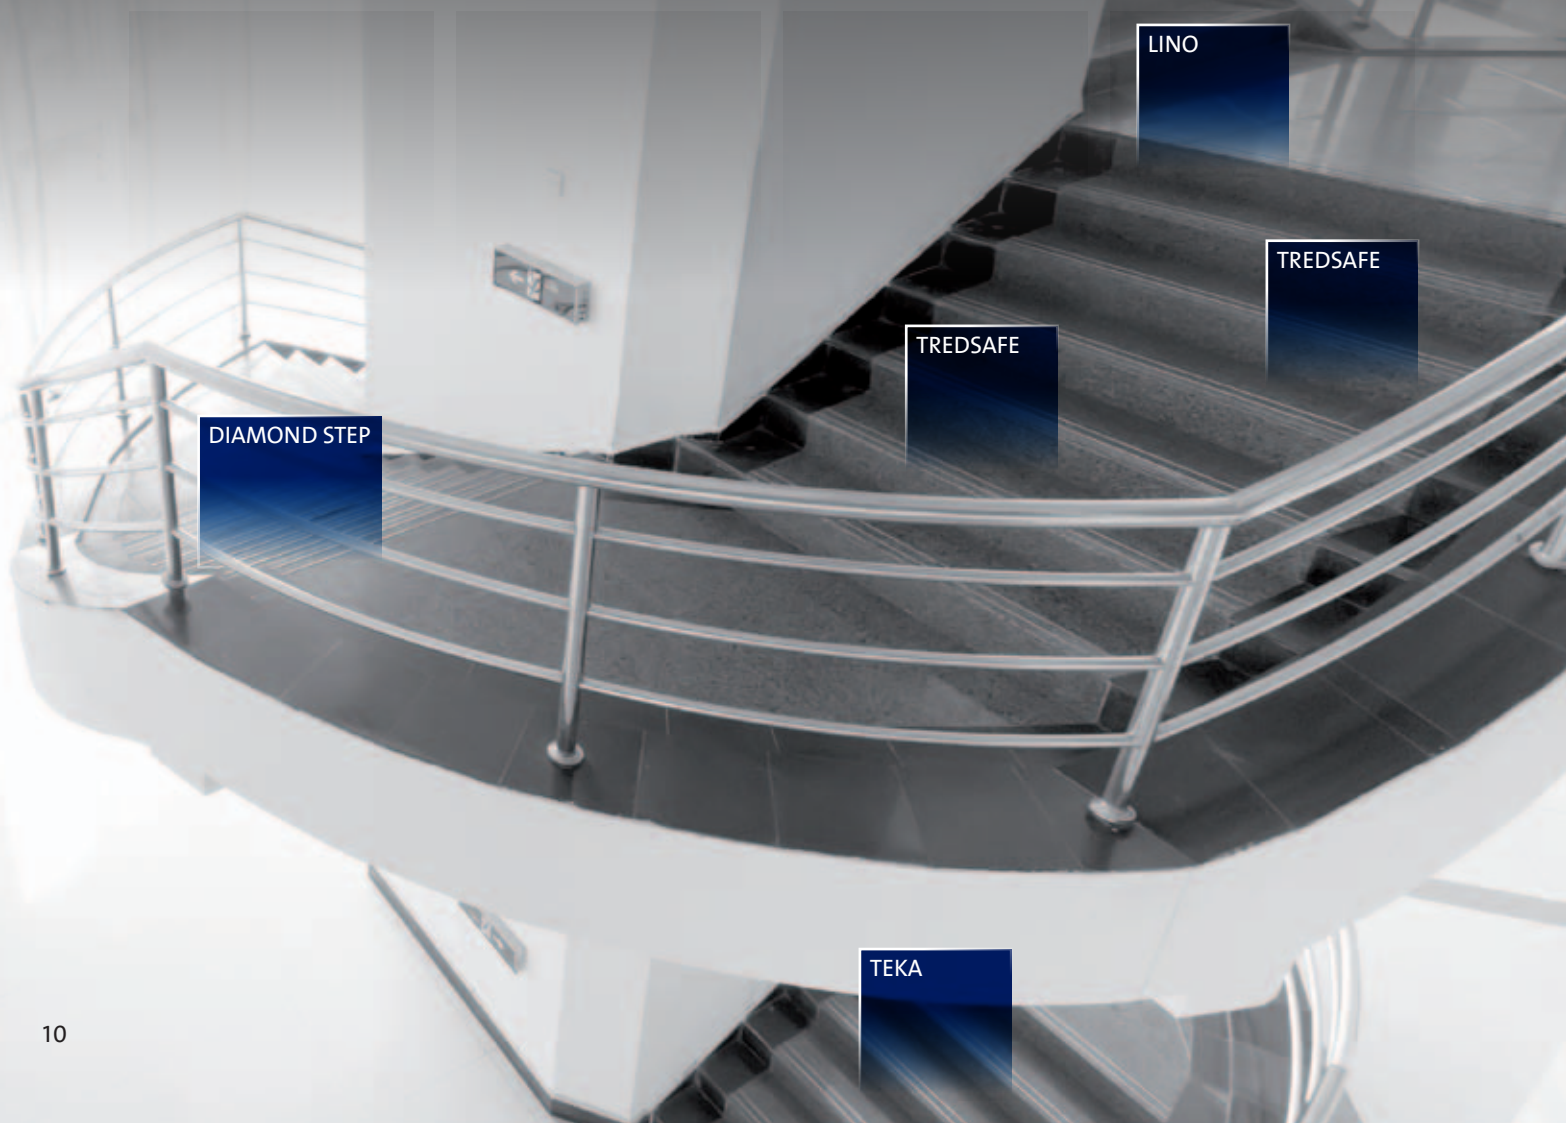

Profile length__270 cm

Colours__Aluminium

anodised silver · gold · bronze

Attachment__screws

Also available with a front edge cover.

DIAMOND STEP

TREDSAFE

LINO

TREDSAFE

TEKA

Even thinner, even finer and also safer –
LINO made of solid aluminium turns a plain design
edge into a safe design edge.

Colours__Aluminium,
anodised silver · gold · bronze
Attachment__
adhesive or screws

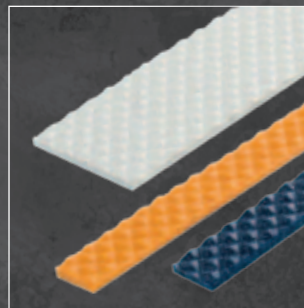

Design requires the freedom to combine options and this
is made possible by the DIAMONDRED and TREDSAFE
stairwell step profiles.

They are based on the DIAMONDRED exchangeable safety
insert. Benefit from these unbeatable advantages in your

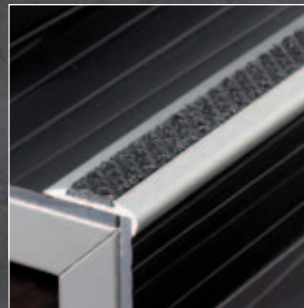

next staircase project with design surfacing:

- > High slip resistance when dry or wet R10/V6
- > 360 ° slip protection due to the unique micro-structure
- > Deformation- and tension-resistant.

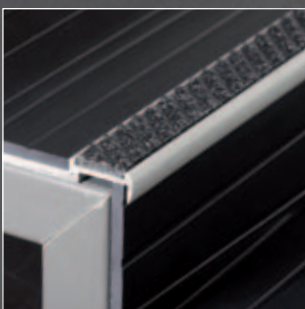

You can also install DIAMONDRED without a profile.

DIAMONDSTEP
Surfacing height__4.5 mm
Profile length__150 · 250 cm
Colour__Aluminium
anodised silver
Attachment__screws

DIAMONDSTEP covers ugly cutting edges and its surfacing
height of 4.5 mm fits most design surfacing solutions.
The crisp, elegant aluminium edge enhances any staircase
and the DIAMONDRED insert is available in matching
or complementary colours.

TREDSAFE is provided in
many profile variations for
a multitude of staircase
geometries.

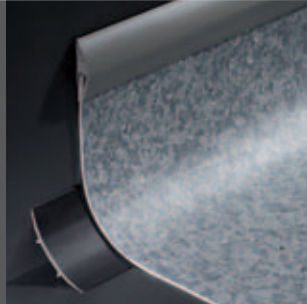

WALL CONNECTING/ EXPANSION JOINT PROFILES

WALL/FLOOR

FOR DESIGN SURFACING

LINO skirting profile

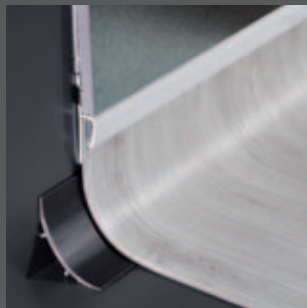

Surfacing height__ 2 mm
 Connecting radius__ flexible
 Profile length__ 200 cm
 Colour__ PVC white · grey
 Attachment__ adhesive

LINO wall connection profiles round off every wall/floor corner, making it easier to clean, more sterile and permanently safe. DURAFLEX interrupts the design surfacing where the foundation requires it or where tension in the surfacing must be absorbed. This is available from as little as 2 mm material thickness.

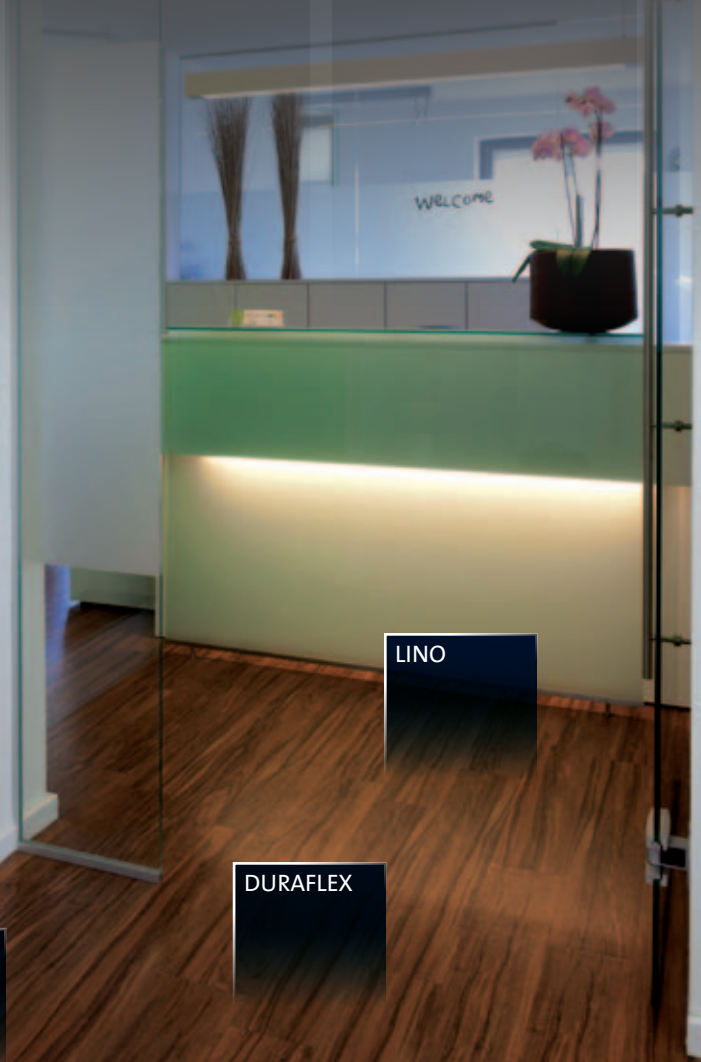

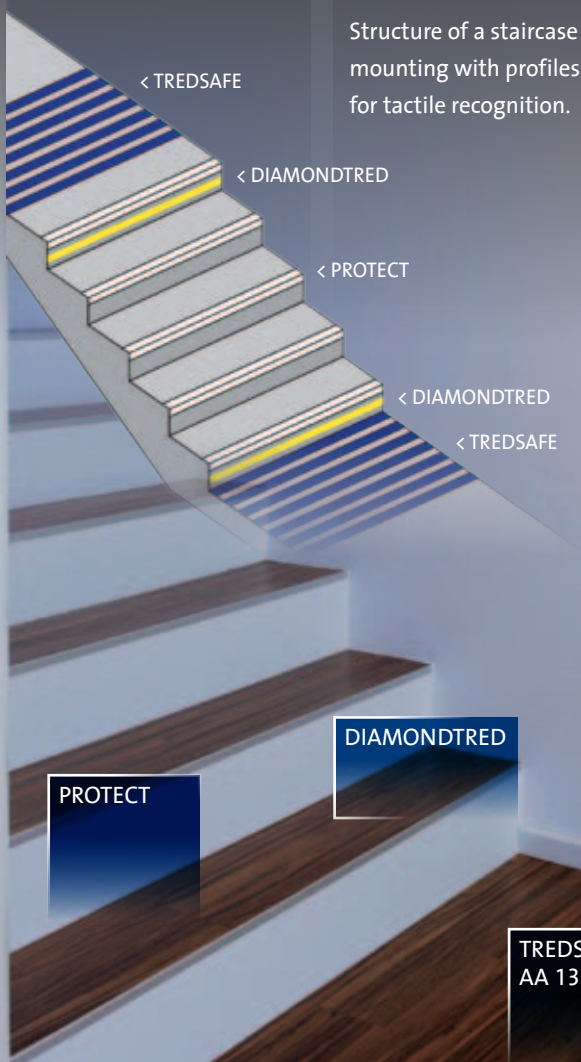

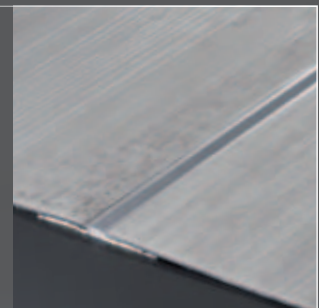

LINO round profile

 Colour__Aluminium, silver
 Attachment__adhesive or screws

People with visual impairments fear staircases. TREDSAFE profiles positioned at the start and the end of the staircase as well as the surface before the first step take this fear away as they allow tactile recognition of the staircase (visually detectable). The DIAMONDTRED safety insert provides the grip and the contrasting colour. It is available in 17 different colours.
