POOL CONSTRUCTION

SWIMMING POOL CERAMICS

100 % MADE IN GERMANY

interbau-blink succeeded in proving itself as specialist for swimming pool solutions. Our swimming pool ceramic programme unfailingly offers an appealing and technically secure solution for public sports facilities, public pools, hotel pools, therapy or private pools.

Ceramic tiles and special pieces made by **interbau-blink** distinguish themselves by their long durability, colour fastness and non-fade properties. They offer optimal hygiene, are particularly low-maintenance and resistant against frost, heat and aggressive substances. All special pieces are extruded and therefore exceedingly true to contour and produced under a high quality standard, based on decades of experience, qualified employees and modern production technology.

SOLUTIONS
WORLDWIDE

MAXIMAL CREATIVITY IN SHAPE & COLOUR

Technical proficiency and industrial production technology at the highest level not only guarantee top quality but also allow a great measure of flexibility for individual planning requirements.

Around 100 basic contours in different lengths offer our special solutions the maximal creative range in line and contour as well as a perfect detail development. The VarioCOLOR colour programme with 52 mono-colours offers unlimited combination possibilities. Clear and vibrant shades from every colour range support individual, creative leeway for indoor and outdoor areas. Particular highlights can be made with the 11 intense and basic colours of the VarioCOLOR programme.

Of course custom-made designs and productions in individual colours are part of our wide-ranged product portfolio.

VarioCOLOR

COLOUR GROUPS | GLAZED | SEMI GLOSS

The VarioCOLOR colour system

The colours of the VarioCOLOR range are influenced and developed considering latest colour technologies. The balanced definition of colours provides clear and powerful colours in any supplied shade. The semi gloss surface of the main colours features elegant presence and is applicable for versatile use. Six intensive colours provide bright and powerful colour effects. High quality colour pigments and optimal composition retain steady colours.

POOL EDGE SYSTEMS

OVERFLOW CHANNELS AND VARIATIONS OF EDGE SYSTEMS

SPECIAL CERAMICS FOR SWIMMING POOL CONSTRUCTION IN HIGHEST QUALITY

The detailed drawings shown on this page should generally inform about our products and their application. In respect of the differences of the possible applications and the general surrounding conditions on the construction sight, these indications can only be considered as general information that will not guarantee any characteristics of our products in particular.

For dimensional sketches please contact us: info@interbau-blink.de

POOL EDGE SYSTEMS

Decisive criteria for the construction are taken from the following leaflets and guidelines issued by the below mentioned German institutes and associations:

- Bundesfachverband öffentliche Bäder e. V.
- Deutsche Gesellschaft für das Badewesen [z. B. KOK Richtlinien für den Schwimmbadbau]
- Zentralverband des Deutschen Baugewerbes [ZDB-Merkblätter]
- Contracting rules for award of public works
- HV der gewerblichen Berufsgenossenschaften [BG-Merkblätter Trittsicherheit]
- Bundesverband der Unfallkassen [GUV-Merkblätter Trittsicherheit]
- DIN | EN | ISO standards

SYSTEM WIESBADEN

HIGH WATER LEVEL

Item index | System Wiesbaden, small channel

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Overflow channel, small	5170
D Overflow channel with drainage	5171
E Grating, rigid	1218
F Drain valve, silent, 2 1/2"	5202

1 Expansion joint
2 Joint band
3 Expansion joint with polyethylen foam round lace
4 Slide bearing
5 Capillary break joint filling
6 Water resistant concrete

Features:

With shaped ceramic in one piece you achieve a safe possibility for a handgrip for swimmers and a drain with a support for the grating.

The water level is approximately 3 cm above the pool surrounding, giving the following advantages:

- Swimmers can be guarded easily.
- Good view to the outside.
- No disturbing smells due to chlorine concentration.

SYSTEM WIESBADEN

HIGH WATER LEVEL | OVERFLOW CHANNEL WITH RECESS

Item index | Overflow channel, small

Item description	Item no.
A Tile of your choice or mosaic, glazed	
B Basic tile standard antiskid glazed	1200 RH
C Overflow channel, small	5270
D Overflow channel with drainage	5271
E Grating, rigid	1218
F Drain valve, silent, 2 1/2"	5202

1 Expansion joint
2 Joint band
3 Expansion joint with polyethylen foam round lace
4 Slide bearing
5 Capillary break joint filling
6 Water resistant concrete

Features:

The front part of the Wiesbaden channel can be applied with an individual surface, offering an endless variety of design possibilities. The formed ceramic Wiesbaden channel system with a high water level offers the same advantages compared to the regular Wiesbaden system. The channel enables swimmers to have a safe grip on the pool edge and additionally offers a support for the grating on top. The water level is approximately 3 cm on top of the surrounding area outside of the pool.

- Simple surveillance of the swimmers.
- Good visibility conditions to the exterior of the pool.
- No chlorine smell inside the pool.

SYSTEM WIESBADEN

LOW WATER LEVEL

Features:

Just like the overflow channel with a high water level the shaped ceramics made of one piece enable a safe possibility for a hand grip and as overflow. A grating is not required. With this system the water level is 20 to 25 cm below the pool surrounding.

Item index | System Wiesbaden, low water level

SYSTEM WIESBADEN

THERAPY POOL SYSTEM

Features:

The small overflow channel enables the therapy guests a safe hold and also enables water flowing off. The therapist is located on the other side of the pool in an area with a dry surrounding. The shape of the pool edge is designed with radial tiles, enabling a well shaped top. This is where nice coloured designs can be set.

SYSTEM FINLAND 1

HIGH WATER LEVEL

Item index | System Finland 1

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Hand grip tile	5730
D Small grooved tile	3130
E Small grooved tile w. safety marking	3136
F Channel with drainage	4901
G Angle tile w. grating support	9039
H Angle tile w. grating support 107°	9050
I Grating, rigid	1220
J Drain valve, silent, 2 1/2"	5202

1 Expansion joint
2 Joint band
3 Expansion joint with polyethylen foam round lace
4 Slide bearing
5 Capillary break joint filling
6 Water resistant concrete

Features:

- Enlarges the "beach effect" and enables a higher water level.
- No reflecting waves from pool edge.
- The complete water level is visible therefore grants swimmers additional safety.
- The water is not blocked by a higher pool edge and therefore avoids disturbing smells or a chlorine concentration.

SYSTEM
FINLAND 1

SYSTEM FINLAND 2

HIGH WATER LEVEL

Item index | System Finland 2

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Hand grip tile with grating support	5810
D Small grooved tile	3130
E Edging tile with grating support	5830
F Channel with drainage	4901
G Grating, rigid	1225

Advice for the purchase of shaped pieces with safety markings:

- Choose the colour of the foothold area first.
- Add this colour number of the foothold area behind the item number.
- Now choose the colour of the VarioCOLOR range for the safety marking and attach it to the colour number above by adding a hyphen.

Example:

Hand grip tile 5730 - Weiß antiskid "C"
Safety marking Azurblau antiskid "C"
Article no. with additional colour no.:
66 5730 906 - 788

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Overflow channel	5150
D Channel with drainage	4901
E Angle tile w. grating support	9039
F Grating, rigid	1220
G Drain valve, silent, 2 1/2"	5202

Features:

Due to the slope inside the channel, noises and fumes are reduced. The edge of the overflow channel is equal to the Wiesbaden channel.

SYSTEM BERLIN

SYSTEM ZÜRICH

HIGH WATER LEVEL

Item index | System Zürich

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Pool edging tile	5450
D Channel with drainage	4901
E Angle tile w. grating support	9039
F Angle tile w. grating support 107°	9050
G Grating, rigid	1225
H Drain valve, 2 1/2"	5102

Features:

- The water level is on or above the pool surrounding.
- The Zürich channel offers a very good hand grip for swimmers on the pool edge.
- The complete water level is visible and swimmers can be guarded well.

SYSTEM ST. MORITZ

ELEVATED POOL EDGE SYSTEM

Item index | System St. Moritz

Item description	Item no.
A Basic tile standard glazed	1200
B Basic tile standard antiskid glazed	1200 RH
C Basic tile, long edge rounded	1200 LR
D Channel with drainage	4901
E Angle tile w. grating support	9039
F Angle tile w. grating support 107°	9050
G Grating, rigid	1225
H Drain valve, silent, 2 1/2"	5202

Features:

- Lower foundation depth with less excavation work.
- Swimming over the level of the pool surrounding enables swimmers to have a good overall view.
- Variable sizes of channels are possible.

* Foothold area achieves slip rating "C" by grooves on tile surface.

Advice for the purchase of ladder step tiles:

- Always choose a foothold area on top in white or grey-yellow antiskid "C".
- Now choose the colour of the VarioCOLOR range for the front section and attach it to the colour above by adding a hyphen.

Example:

Ladder step tile 5565

Foothold area on top: Weiß antiskid "C"

Front section VarioCOLOR Lichtblau glossy

COLOURS FOR GRATINGS

-  901 White
-  921 Grey
-  271 Yellow
-  131 Beige

Important advice for the purchase of gratings for channels:

- Please add the colour no. to the item number.
- Covering gratings are specially produced for projects in order to fit. Therefore exact measurements are required.
- Custom made curved-gratings and corners can be manufactured on behalf of stencils on paper for example.
- The price groups [PG] listed on this page refer to the displayed items in the standard colours. Individual colours, sizes and special corners are available upon request.
- Please consider that additionally to the pool length the specific width of the channel has to be considered for the calculation [outside measurements according to the drawing on the right].
- Per corner an additional surcharge must be considered which depends on the specific shape of the corner.

TECHNICAL INFORMATION

Cleaning and maintenance

Cleaning instructions for ceramic tiles

Compared to other covering materials, ceramic tiles grant excellent properties in maintenance. Long durability, easy cleaning combined with best hygiene characteristics and high functionality in private and public areas are the best reasons for this strong and decorative material. **interbau-blink** glazed and unglazed tiles are ideal for cleaning without problems. Please consider never to use cleaning agents containing hydrofluoric acid or its compounds (fluorides). They attack every ceramic even if diluted with plenty of water. Of course it makes sense to keep foot-scrappers, floor mats, cleaning zones and entrance areas clean too, in order to prevent the dirt getting inside in the first place.

For cleaning the following principles apply:

1. Choice of the appropriate cleaning agent.
2. Allow the cleaning agent sufficient time to act upon the dirt and to loosen it.
3. The process must be supported mechanically by brushing or wiping. Do not use pads or brushes with abrasive grain addition!
4. Collect the separated dirt thoroughly by washing and absorbing.

The first cleaning that takes place immediately after finishing the laying works should be done as follows:

First the coarse dirt is removed by sweeping. Afterwards, thorough cleaning follows by applying the appropriate cleaner. Cement residues can be removed with acid cleaning agents, so-called cement film removers. Please consider that acid cleaners attack cement joints. This can be prevented by protecting the joint through prewetting and thorough cleaning of the covering with clear water afterwards. Depending on the concentration, neutralization shall take place. Normal dirt can be removed best with alkaline or neutral cleaners.

Heavily frequented areas:

The cleaning is required according to the degree of dirt. In case of heavily frequented areas, cleaning should take place several times a day. In general, it is sufficient to use commercially available cleaners for the regular cleaning. Please consider that cleaners with combined long-term preparation possibly may cause layers of fat, wax or synthetic layers, which may have negative influence on the slip resistance and might harm the visual properties of the tile.

Difficult stains:

The easiest way to remove difficult stains, calcareous deposits, urine stone and metal abrasion residues is the application of acid cleaners. Consider to remove the acid cleaner completely by rinsing with clear water or neutralizing after sufficient time for the cleaner to act upon the dirt. Paint drops, tar or similar residues can easily be removed with gasoline, acetone or caustic pastes. This also applies for epoxy resin. Grease, wax and oil can be loosened by highly alkaline cleaners and are easy to remove afterwards.

Unglazed ceramics:

Unglazed ceramics without impregnation may show stains caused by this contamination, which can not be completely removed again. Unglazed ceramic tiles without in-plant upgrading should be impregnated as prevention in cases where practical experience shows that the floor may come into contact with grease or oil.

Special ceramics:

In our production programme you will find a wide range of slip resistant glazed and unglazed tiles. These products are specially developed for application in public, commercial, industrial areas as well as wet barefoot areas like swimming pools, showers, saunas etc. Depending on the area of application they have rough or profiled surfaces. The most effective method of cleaning is granted with brushing machines, high-pressure or vapour pressure cleaners. Do not use brushes or pads containing abrasives as they will have a negative impact on the slip resistance of the tile. Take care that the tile surface is thoroughly rinsed from cleaning liquids and disinfection liquids with clear water in order to prevent the floor covering to become slippery. For first and general cleaning we propose alkali based cleaning liquids. An acid cleaning should just be made from time to time depending on the degree of dirt and mainly depends on the type of water used. The German organization "Deutsche Gesellschaft für das Badewesen" has established a list with tested cleaning liquids for ceramic surfaces in swimming pools. These cleaners will also be proposed on our behalf for the cleaning of our tiles. Impregnation of glazed or unglazed ceramic surfaces may alter the performance characteristics (visual properties, slip resistance) of the ceramic.

Minimal iron lumps:

Due to the nature of ceramics minimal iron lumps may occur, which in single cases appear as small black spots. They do not influence the visual effect or quality.

Wet barefoot areas

Test procedure: Inclined plane, walked on barefoot, wetting agent solution as test medium. The surfaces are smooth, micro-rough, or slightly profiled. The respective areas are assigned to the valuation groups. Not all wet barefoot areas can be considered.

Valuation group A: Barefoot passages [nearly dry], individual and common dressing rooms, pool floors in the non-swimmer areas if the water depth is more than 80 cm in the entire area

Valuation group B: Barefoot passages [not classified in group A], showers, areas of desinfecting spray facilities, pool surrounds, pool floors in the non-swimmer areas [if the water depth is less than 80 cm in certain areas], pool floors in the non-swimmer areas of wave-action pools, moveable floors and paddling pools, ladders and stairs outside the pool area, sauna and relaxation areas [not classified in group A]

Valuation group C: Barefoot passages [not classified in group B], walk-through pools, inclined pool edge designs, ladders leading into the water, stairs leading into the water with a maximum width of 1 m and handrails on both sides

Advice: Tiles with the characteristic "B" resp. "C" and "B/C" for slip resistance should only be used in wet barefoot areas because of increased cleaning requirement.

Test on „inclined plane“

OUR GSTCS | GENERAL SALES TERMS AND CONDITIONS

I Scope of application

1. The following terms and conditions of sale and delivery shall apply exclusively, we hereby expressly preclude any contradictory general terms and conditions of business of our contractual partners.
2. These general sales terms and conditions apply to the sale of products. The following conditions only apply to companies and corporate bodies.

II Offers | Orders | Commitment period, cancellation, product specification

1. The seller is committed to his offers for two weeks. The purchaser is also committed to his orders for two weeks. The cancellation of received offers/orders is only possible for legal reasons, e.g. appeal. The same applies to completed sales contracts.
2. Samples and patterns provided only serve the purpose of viewing and do not specify the character of the goods.
3. Colour shades and decorative pictures of products produced from different production batches may differ visually.
4. Product descriptions do not represent any guarantee assurance.
5. If the purchaser wishes for the submission of an offer for a certain area, the offer is based on prices per m². The price per m² will be calculated considering the technically necessary joint surface.
6. Products that are identified as first choice are compliant with the requirements of the corresponding standard regulations. Products that are marked as second or third choice do not or partly do not meet the requirements of the corresponding standard regulations and may contain defects of visual and/or technical nature.
7. Offers include a delivery "EXW Ransbach-Baumbach" in accordance with the Incoterms 2010.

III Prices

All prices of the purchase object is ex manufacturer works plus the respective applicable statutory sales tax. The price per m² will be calculated considering the technically necessary joint surface. Discounts or other deductions require specific agreements.

IV Packaging and Shipping

1. All products are packaged and bundled in the factory according to the choice of the seller.
2. If the purchaser wishes for the seller to organize the shipment of the goods, the seller assigns a forwarding agent or a parcel service – depending on the volume and weight of the goods – with the retrieval and delivery on the behalf of the purchaser.
3. If there has been an individual agreement with the purchaser that instead of a delivery EXW Ransbach-Baumbach the shipment or delivery should be directed to an address given by the purchaser, the seller is free in his choice regarding the type of shipment. The delivery and shipment will be entirely at the purchaser's risk. The seller is only liable for the negligence of his own transport personnel, if he or his agents are culpable for (criminal) intent or gross negligence.
4. If pallets are provided by the seller for shipments according to IV 2 or IV 3, the purchaser is obliged to return the pallets within 14 days to the seller. In case the purchaser culpably does not return them in due time, the seller is entitled to demand compensation.
5. In case the delivery is delayed due to a circumstance, whose cause lies with the purchaser, the purchaser carries the risk from the day on which the supplier is ready for dispatch and has notified him.
6. If the shipment is performed by a carrier, forwarding agency, train, ship or plane, the purchaser has to report the loss or any outwardly apparent damages of the transported goods upon receiving to the carrier, forwarding agency or deliverer and has to take other measurements necessary for further claims of compensation.

V Payment and Default of Payment

1. The purchase price and balances for additional services are payable immediately following delivery (dispatch or availability for collection).
2. Cheques will be accepted only after special agreement for the individual case and subject to clearance. The costs of discounting and draft fees are to be settled separately and immediately by the purchaser. Clearance occurs only after irrevocable crediting of the cheque.
3. The purchaser may charge against the claims of the seller only if the counterclaim of the purchaser is undisputed or concerns a debt for title of judgement. The purchaser may legitimately exercise a right of retention only where this concerns rights from the same agreement.
4. If the purchaser goes into default of payment of a debt to the seller, the seller is entitled to charge interest at 9 % over the base rate for legal transactions where consumers are not involved. This does not affect the assertion of claims above and beyond this for damages caused by delay.
5. In exceptional cases, if partial payments are agreed upon, the remaining balance still outstanding is then due and payable immediately and without consideration of the due date of any drafts presented in the event that the purchaser goes into default of more than 14 days.
6. If the seller is obliged to perform in advance due to a mutual contract, he can refuse to carry out the performance if after the conclusion of the contract it is foreseeable that the supplier's right of counterperformance from the purchaser is at risk. With a substantial impairment of the financial standing and in the case of imminent insolvency, the seller is entitled to perform further deliveries only if paid in advance or is entitled to demand a suitable safety bond. If this suitable security is not given within a reasonable period of time, the seller is entitled to terminate the contract upon expiry of that period of time and to demand compensation for non-fulfilment.

VI Delivery, Default of Delivery and Delivery Quantities

1. If the purchaser determined a preferred date for the delivery, which was not previously agreed on, the seller will make best efforts to meet the deadline. The same applies, if a non-binding date of delivery or delivery period was agreed on. The seller shall go into default only after relevant notice of delay by the purchaser.
2. A possible agreed delivery date or period starts with the signing of the contract, but not before the purchaser has supplied all the required goods and services in advance, if necessary, e.g. any documents to be procured, permissions, approvals as well as the receipt of an agreed advance payment.
3. A fixed or approximately agreed delivery term or delivery date shall be extended by the period for which the seller was prevented from providing the service as a result of interruptions to operations for which the seller was not responsible, e.g. operational disruptions, delays in the delivery of essential materials, as long as such hindrances demonstrably have a considerable influence on the delivery of the item and are beyond the control of the seller. This shall also apply, when such circumstances occur at our sub-contractors. The agreed delivery term shall be extended by the period of such measures and hindrances. The seller should neither be liable for the aforesaid circumstances in case the progress is already in delay.
4. If on-demand or call-off deliveries are subject of an agreement, a delivery will not be carried out earlier than 7 working days after the seller received the retrieval notice. The seller is entitled to object to the required retrieval, if the delivery is not possible or reasonable at the desired delivery date. The purchaser will be notified with the expected delivery date at least 48 hours in advance.
5. Partial deliveries within the requested delivery period are permissible, as far as they do not result in any disadvantages for the purchaser.
6. In the case of order-related production and particularly custom-made production, the seller is entitled to carry out excess or short deliveries of up to 5 % of the quantity ordered. The quantity supplied will be charged.
7. Deliveries made by the seller shall be subject to timely and correct self-delivery: If the seller can not provide performances due, although he made a congruent hedging transaction, he will be freed from his performance obligation. This only applies if the seller did not induce these circumstances through gross negligence or when no transitory impediment to performance on the side of the purchaser exists. The seller will immediately be notified about this by the purchaser and refund any potential advance payments. The same applies, if the goods to be supplied are manufactured by the seller himself and the seller can not provide the required performance because the sub-supplier did not deliver the materials necessary for the production in time, although the contracts about the delivery were concluded congruently and in time.

VII Retention of Title

1. All goods delivered by the seller remain the property of the seller until complete settlement of all matured and maturing claims against the purchaser. The seller is entitled to take back the goods if the purchaser acts in violation of the contract. The demand to return the goods can not be considered as a withdrawal from the contract unless expressly stated by the vendor. The retention of title also extends to recognised balance claims from the current account.
2. The purchaser shall keep the goods that are subject to retention of title carefully and free of charge and has an obligation to store them separately at the request of the seller.
3. The purchaser is entitled to sell or process the goods within the normal course of business. In the case of resale, the purchaser hereby cedes to the seller the claims arising against third parties and in favour of the purchaser, to the full value of such claims and inclusive of all security and subsidiary rights. This also applies for the rights accrued by the purchaser against a third party as a result of the installation or connection of the goods with a building or property. However, the purchaser is authorised to independently collect the debt as long as the payment obligations of the purchaser are fulfilled.
4. Should the purchaser fall into default of payment to the seller, the same shall be entitled to revoke the authorisation of the seller, to inform the third party of the cession and to collect the debt independently. In this case, the purchaser is obliged to avoid any access to the debt and particularly the collection of such. Furthermore, the purchaser shall be obliged to provide the seller with the name of the garnishee, to issue to the seller all the information and documentation required for the collection of the debt and to notify the garnishee of the cession.
5. On demand by the purchaser, the seller shall be obliged to transfer back securities selected by the same where these exceed the debts to be secured by more than 10%. 6. In the event of access by third parties to the goods that are subject to retention of title and particularly in the case of compulsory enforcement measures in the retained title, the purchaser shall inform the seller immediately and notify the prosecuting creditor/third party of the title of the seller.

VIII Defects, Notices of Defects

1. A defect is not assumed when the seller delivers an insufficient quantity and/or merchandise of higher value. In the case of insufficient quantity the purchaser shall only be entitled to claim the subsequent delivery of the missing quantity. Provided that the products are conform according to DIN EN 14411 and the relevant standards, there is no material defect in this respect.
2. The seller may decide on his own reasonable discretion, whether the supplementary performance should be carried out in the form of remedying the defect or by supplying goods free from defects. The seller can refuse both forms of supplementary performance if their fulfilment would lead to disproportionate costs. If the purchaser installed the defective item in accordance with its nature and intended purpose in another item, attached it to another item or used it in accordance with its usual purpose for a building, the seller is not obliged to replace the necessary expenditures for the removal of the defect items, the installation or mounting of the repaired or supplied non-defective item from fulfilment of the supplementary performance. The purchaser bears the expenses of the supplementary performance, which are caused by the installation of the goods at another place than the place of fulfilment.
3. If the seller delivers an item free from defects for the purpose of supplementary performance, the purchaser must return the defective items immediately. With the return the ownership is transferred back to the seller.
4. The supplementary performance will only be undertaken, when the purchaser previously paid the agreed payment less the costs of the deficiency. The deduction can not be more than threefold compared to the costs of correcting the defect.
5. The subsequent improvement shall not be considered as failed after the unsuccessful second attempt.
6. The withdrawal from the contract, the reduction and the assertion of claims for damages presume that the purchaser has unsuccessfully given the seller a reasonable time limit for the supplementary performance. This also applies when the purchaser himself sold defective goods to a third party and then had to take back the goods due to their defectiveness or because the third party reduced the purchase price.
7. If the purchaser deals as a registered merchant as defined in the German Commercial Code (HGB), the statutory duty to examine and notify defects shall apply. If the inspection and reclamation guidelines are not followed, the goods/services are considered accepted with respect to the defect in question.
8. Faulty goods are to be kept ready for inspection.

IX Limitation of the purchaser's defect claims

1. Defect claims made by the purchaser expire by limitation after 12 months.
2. Number 1 shall not apply:
 - for defects in a building and/or goods which are used in accordance with their usual purpose for a building and which caused its defectiveness;
 - if the seller fraudulently concealed the defect;
 - if the seller granted warranty of the qualities of an object/our services or has overtaken a durability guarantee and the defect is within the scope of this guarantee;
 - to any claims of damages by the purchaser, that aim at compensation for injury to body or health. For any culpable injury of life, body or health the seller shall be liable in accordance with the legal regulations;
 - to any claims of damages by the purchaser, that are based on a grossly negligent or deliberate violation of duty by the legal representative or vicarious agent of the seller;
 - to claims based on the culpable breach of duty by the seller regarding the handing over of the object purchased free from material defects and defective titles and his obligation to provide its ownership;
 - to the sale of used goods. Guarantees are excluded for the purchase of second-hand goods;
 - to contractors and their recourse claims, which resulted by him fulfilling justified defect claims of his own customers, who are consumers, due to defects of the purchased item.

X Liability

1. The seller shall be liable for every culpable violation of life, body or health in accordance with the legal regulations.
2. All other purchaser's claims for compensation are excluded.
3. Number 2 shall not apply:
 - in the case of the seller's intent of culpable negligence;
 - if the seller maliciously conceals the defect;
 - if the seller granted warranty of the qualities of an object/our services or expressed a durability guarantee and the defect is within the scope of this guarantee;
 - to claims based on the culpable breach of duty by the seller regarding the handing over of the object purchased free from material defects and defective titles and his obligation to provide its ownership; in that case the liability is limited to those damages whose occurrence can typically be expected within the scope of the conclusion of the agreement. 4. In case of ordinary negligence by the seller the right of the purchaser for the equivalent of deferred damages is limited to 10 % of the purchase price agreed upon.

XI Final Provisions

1. In business transactions with traders, businesses, corporate bodies under public law and fund assets under public law, the place of fulfilment shall be the head office of the seller.
2. For disputes concerning claims of any type arising from business relations with businesses, corporate bodies under public law and legal fund assets, the court at the head office of the seller shall be responsible.
3. German law shall apply to the exclusion of the UN Sales Convention.
4. Should individual conditions of these general terms and conditions of sale and delivery be wholly or partially invalid, this shall not affect the validity of the remaining conditions.
